### ALUMINIUM RANGE: HOLO

Cité des Civilisations du Vin (Bordeaux, France) HOLO Gold Silver Architect: X-TU

#### HOLO FINISHES

The survival of any species is very related to the capacity to adapt to the environment. **Alucoil**\* has been inspired by the ease of chameleons to change their image to create this range of Holo finishes, where a finish becomes two and even three different colours depending on how the light affects the façade.

## ALUMINIUM RANGE: ALUNATURAL

National College of High Speed Rail (Doncaster, UK) ALUNATURAL Anodic Brushed Glossy Architect: Bond Bryan Architects

#### **ALUNATURAL FINISHES**

Because sometimes there is no better finish than the one given by our surroundings, the range of Alunatural finishes offer different types of reflection, sharpness and even colours depending on the desired target.

Weybridge Business Park (Surrey, UK) ANODIZED LOOK BLACK C35 Architect: Scott Brownrigg

### ALUMINIUM RANGE: ANODIZED LOOK

SILVER EV1 (ES1749)

To anodize is to protect, but also to beautify the aluminium. **Alucoil**<sup>®</sup> has a wide portfolio of finishes that match anodized finishes, keeping the folding and curving properties of composite panels. There are no limits to elegance.

Elegance in the design #nolimitstoelegance #protectcolours

Composite panels are a high-tech product for architectural façade cladding.

According to the external and internal metal sheets and the type of core that joins both metal sheets the panel can be:

<sup>(1)</sup> With the **Metals** range the aluminium sheets are replaced for stainleess steel, copper, brass or zinc sheets. <sup>(2)</sup> There are 3 types of core depending on the required fire rating in each country.

larson\* A2 panel was developed for projects in which the highest fire classification is required. A2-s1, d0 classification (EN 13501-1). larson° FR panels are formed with a FR mineral core that delays its combustion. B-s1, d0 classification (EN 13501-1). Alucoil\* also manufactures a composite panel bonded with a polyethylene PE core. This product is meant to be used only on low rise buildings, canopies, signage and corporate identity.

Core<sup>(2)</sup>

## by Alucoil<sup>®</sup> A2

Aluminiun honeycomb panels were developed for architectural façade cladding. It is an extremely lightweight and rigid panel which is fire proof, non-toxic, recyclable, insulating and energy efficient. A perfect panel for large modulation with the possibility of choossing among an infinite range of finishes.

#### HMC School Rotterdam (Rotterdam, Holland) TEXTURED BASALT RAL 2001 & 7016 Architect: RoosRos Architecten

### ALUMINIUM RANGE: TEXTURED & DESIGN

TEXTURED OXIDE 1 (ES1869)

Why be satisfied with any kind of finish if we can match the desired texture with the maximum coating quality?. The range of customized colours mimics the touch of ceramics, the oxide of metals, the texture of basalt all with the durability and lightweight qualities of a composite panel.
